Ideation Phase
Empathize & Discover

Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Document Focus	Creation of Users, Roles, Tables and Access Control Lists
Milestones	User/Role Creation → Tables → READ → CREATE → WRITE → DELETE
Outcome	ACL configuration and verification

Empathy Map Canvas:

This empathy map is based directly on the uploaded Script-Controlled ACL micro-project. The project focuses on creating users and roles, creating tables, creating READ/CREATE/WRITE/DELETE Access Control Lists, verifying each ACL, and recording the final outcome.

HEARS • Instructions for User Creation • Instructions for Role Creation • Guidance for ACL creation and verification	**THINKS & FEELS** • Wants each ACL configured correctly • Wants verification after every ACL • Wants confidence in the final outcome	**SEES** • User and role setup • Tables being created • READ, CREATE, WRITE and DELETE ACL options
HEARS • Steps to click New and create each ACL • Verification instructions after configuration	**SAYS & DOES** • Creates users and roles • Creates tables • Creates each ACL • Performs Verify steps • Checks the outcome	**SEES** • ACL records after creation • Verification results • Changes made to the project configuration
PAIN • Incorrect user or role configuration • ACL creation mistakes • Verification failure • Difficulty tracking multiple ACL stages	**USER / CONTEXT** **SCRIPT-CONTROLLED ACL PROJECT** **User/Role Creation** **Table Creation** **ACL Configuration** **Verification**	**GAIN** • Users and roles configured • Tables created • Four ACL operations configured • Verification completed • Clear project outcome

Key Empathy Insights

- The project requires a structured sequence: create users and roles first, then create tables and ACLs.
- Verification is an important part of the workflow because the document includes a Verify step after each ACL type.
- The project covers four access-control operations: Read, Create, Write and Delete.
- The final outcome depends on completing the configuration and verification steps across the full ACL workflow.
