Ideation Phase
Define the Problem Statements

Date	03 October 2026
Team ID	SWTID-2026-7991
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	2 Marks

Customer Problem Statement Template:

The problem statements below use the reference sequence: I am (Customer) → I'm trying to → But → Because → Which makes me feel. They are derived from the Script-Controlled ACL project and its EEE branch access requirements.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	an EEE branch user with the bb1 role	view Institution Details records relevant to my branch	I must not see records belonging to other branches	the system needs to enforce the Branch = EEE condition together with the READ ACL	secure and confident that unrelated records are protected
PS-2	a ServiceNow security administrator	give users only the operations they are authorized to perform	users may need different create, edit and delete privileges	CREATE, WRITE and DELETE are controlled separately through bb2, bb3 and bb4 ACLs	in control of record security and able to verify permissions clearly

Problem Statement Interpretation

- PS-1 focuses on record visibility and the EEE user's need to access relevant Institution Details records without exposing records from other branches.
- PS-2 focuses on the administrator's need to separate permissions by operation through bb2, bb3 and bb4 and verify the resulting access behavior.
- Both statements connect to the project outcome: script-controlled READ, CREATE, WRITE and DELETE ACLs protect records from unauthorized viewing, modification, creation and deletion.

Project Mapping

PS-1 → READ access: bb1 + Branch = EEE. PS-2 → CREATE / WRITE / DELETE: bb2 / bb3 / bb4. Verification → impersonate users and verify permitted and denied operations.
